*index.hr, CNN: INDIA IS KEY TO AVOIDING CLIMATE CATASTROPHE*

The dilemma between economic growth and decarbonization. The Modi government sets high goals, but when it comes to achieving them, a dilemma arises between development and decarbonization. India’s actions have huge implications for the global fight against climate change.
Even experienced investors were surprised by the analysis of how much returns in Indian shares were higher than in Chinese shares over 30 years. Is India positioning itself as one of the world's leading superpowers alongside the United States, the EU and China? The very rates of growth of the Indian economy, as well as the fact that India has already become the most populous country in the world, show that the scale of its importance is growing.
